Profile

Dedicated junior Software Developer with experience in back-end and front-end development tools. Skilled in various programming languages such as Java, Python, C, SQL, NoSQL, MongoDB, React.js, Node.js, Express, HTML, CSS, JavaScript. Excellent at collaboration, problem-solving and critical thinking. Avid reader and learner of new things, proficient communicator and listener.

I enjoy reading and writing fiction, with an adoration for learning new things and being helpful to others. I love learning more about the world and ways of becoming a better person. I believe that with these skills, among others that I have, I will become a great asset to the company and will be beneficial to the company and the stakeholders reaching their goals.

Education

2024 - Current: **IIE Bachelor of IT in Business Systems**, IIE Rosebank College (IIE RC)

2021 - 2021: **Mathematics for Access**, University of the Witwatersrand (WITS)

- Graduated with distinction, achieving 84% passing average

2017: **National Senior Certificate**, Matric, Queens High School (QHS), Johannesburg

Courses

Dec 2025 - Dec 2025: CS50P, Harvard University

Jul 2025 - Jul 2025: CS50x, Harvard University

May 2025 - Jul 2025: FNB App Academy

Jan 2023 - Dec 2023: Full stack web Development, HyperionDev

Work Experience

January 2023 - December 2023: Full-stack web development, HyperionDev, Johannesburg

- During my tenure at HyperionDev, I was exposed to many facets of full-stack web development. Among other topics, the concepts of front-end, back-end REST (ful) API's, databases, and such were discussed.
 - During my tenure there was a portfolio that had to be deployed on the platform Vercel. Several attempts were made to deploy the portfolio, but all were unsuccessful. I then conducted research and discovered something in the portfolio and the documentation. Vercel has strict requirements for deploying projects on that platform, but the portfolio did not meet those requirements. I redid the portfolio and made the needed adjustments to both the code and the documentation, and the project was successfully deployed.
- - During my first year at Rosebank college, my cohort were organized into groups for a class project, create a website. After communicating the requirements of the website, we discussed and discovered that I was the best individual to spearhead this project. I

volunteered to the role of the leader and began to educate on the coding languages needed to create a website, including HTML and CSS. I also taught the group coding etiquettes such as creating comments, removing out redundant or bad code. We ended up with a distinction on that project.

Projects

- Created a calculator program using Java that is able to add, subtract, divide and multiply into multiple decimal places
 - Created a to-do list software using Python, SQL, JavaScript, HTML, CSS that has the following features: Requiring registration and logging, adding, editing, deleting tasks and marking tasks as complete
 - Created a Kanban to-do list app using Java with the following features: A registration that must fulfil certain requirements, logging in using the valid and stored credentials. Adding of tasks, assigning tasks, as to-do, doing or complete, seeing a full list of tasks
 - Created a program that uses written SQL queries to answer questions about a database of the 100 most-streamed songs on Spotify in 2018.
-

Skills

Technical Skills:

- Software development in JavaScript, C, Java, Python
- Have designed, developed, integrated and deployed multiple electronic programs and computer software in various languages such as JavaScript, Java, Python, C, and WordPress
- Static and dynamic web development, including the idea, creation, integration and launch of websites and web applications, with full stack languages such as React.js, Express, MongoDB, Node.js, HTML, CSS, JavaScript, Python, etc.
- Web API integration into projects and have incorporated APIs into applications, such as the iTunes API and dictionary and thesaurus API
- Source version control having been practiced in various applications, enabling identification of areas of improvement and redundancies.
- Microsoft office suite, with proficient use of Microsoft Word, Microsoft Excel, Microsoft PowerPoint.
- Canva for the creation of personal and professional documents and projects.
- Business analysis for the identification, documentation and disclosing of methods that can assist in making the business more profitable and having the business processes more effective and efficient.
- Data analysis allowing the capturing, recording and organizing of data into valued information that can be used by a company and the involved stakeholders to make better decisions for the benefit of the company.

- System analysis for the process of studying a business, software or process and breaking it down into its individual parts to determine which parts of it can be improved to increase efficiency and effectiveness of the system to the organization.
- System Design to define the requirements, both functional and non-functional, the components and aspects of a system that need to be developed to fulfil the requirements of the client or customer.
- Database design to organize a company's data into well designed tables to ensure data integrity, remove errors and to be of better use to a business.
- Database development to design, develop, integrate and maintain database to ensure that a business complies with legal regulation and ensures that data is adequately secured.

Soft Skills:

- Communication: Able to align individuals of different skills sets to ensure the success of projects at Rosebank College.
- Collaboration: Worked together with others in a professional capacity towards a common goal in projects, and group work.
- Dependability: Have been relied on to assist students with projects, in a tutoring position. Have taught modules and subjects at a secondary and tertiary level.
- Problem solving: Assisted in students with course concerns and have created plans to assist them in their endeavours
